

Committing Basics Exercise

1. Create a new folder called `Shopping`
2. Initialize a new git repo inside of the `Shopping` folder (make sure you're not already inside of a Git repo!)
3. Make a new file called `yard.txt`
4. Make another new file called `groceries.txt`
5. Make a commit that includes both empty files. The message should be "create yard and groceries lists"
6. In the `yard.txt` file, add the following changes:
 7. - 2 bags of potting soil
 8. - 1 bag of worm castings
9. In the `groceries.txt` file, add the following:
 10. - 4 tomatoes
 11. - 6 shallots
 12. - 1 fennel bulb
13. Make a new commit, including **ONLY the changes from the `groceries.txt` file.** The commit message should be "add ingredients for tomato soup"
14. Make a second commit including **ONLY the changes to the `yard.txt` file.** It should have the commit message "add items needed for garden box"
15. Next up, add the following line to the end of `groceries.txt`
 16. - couple of seed potatoes
17. In the `yard.txt` file, change the first line so that it says "3 bags of potting soil" instead of "2 bags of potting soil"
 18. - 3 bags of potting soil
 19. - 1 bag of worm castings
20. **Make a commit that includes the changes to BOTH files.** The message should read "add items needed to grow potatoes"
21. **Use a Git command to display a list of the commits. You should see 4!**
